Product Description

The benchtop centrifuge D-16C with refrigeration is designed for an average sample capacity and with a maximum speed of 15,300 rpm is well-suited for various molecular biology applications. Swing-out and fixed-angle rotors facilitate centrifugation of volumes between 0.2 ml and 100 ml as well as microplates, PCR-, cell culture-, or diverse types of deep-well plates.

The selection of rotors is particularly adapted to the comprehensive portfolio of specialized Sartorius ultrafiltration units. To prevent dispersion of sensitive samples at the beginning or end of a run, all rotors allow for acceleration or deceleration curves to be adjusted in 10 steps.

The D-16C micro-centrifuge is very easy to use and all relevant parameters can conveniently be set by the use of a single one control knob. For additional safety, an input- and program-lock can be activated to prevent the unauthorized use or manipulation of stored programs. The centrifuge is operated via the splash-proof keypad featuring an integrated LCD display, which is mounted in an ergonomically user friendly angle. With its large storage capacity for 50 programs the micro-centrifuge D-16C provides generous space to permanently save various user specific methods.

Through automatic rotor detection and cycle counting the micro-centrifuge D-16C ensures maximum safety by securely preventing that permitted cycle numbers and speed of the rotors are exceeded. Additionally, reliable cooling of precious samples to 4°C is warranted even at maximum speed. Furthermore, the integrated "Rapid Temp" function facilitates that the rotor and the rotor chamber are pre-cooled to a preset target temperature prior to sample loading. As a result valuable samples remain reliably cooled in the whole process. Optionally the programmed time is counted only after reaching the set speed, so that the different acceleration and deceleration times of the rotors are no longer relevant. Thus, one and the same program can be applied using different rotors while still guaranteeing reproducible results.
